

StoneAge Lighting Features and Benefits

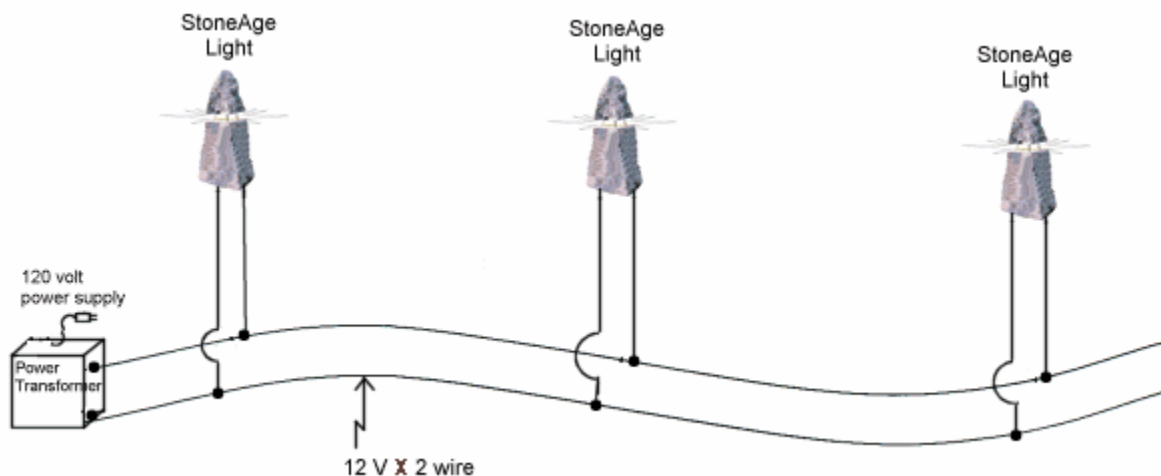

StoneAge Lighting's Low Voltage Garden Lighting System

StoneAge Lighting's low voltage garden lighting systems operate at 12 volts rather than 120 volts. This low voltage virtually eliminates any risk of shock during and after installation.

SAFETY: Bare terminals and cables running in the garden may be touched without the risk of electrical shock.

EASY TO INSTALL: Low voltage wiring is not subject to the complex electrical wiring rules associated with 120 volt systems. Simply plug in the power transformer, bury the main cable into the ground and hook up StoneAge Lights using the electrical connectors (marretts).

ECONOMICAL: The StoneAge garden lighting system is ready to install. No special wiring boxes and no special fittings or connectors. Only a 2 inch deep narrow trench need be dug using a common garden shovel.

StoneAge Lighting™ products allow you to unlock the natural beauty of those "Special Areas" that give your property personality!

Create a natural Daylight setting that springs to life when the sun goes down. The matchless beauty of StoneAge Lighting™ products allow you to easily develop a uniquely personal, stunningly beautiful setting for your Garden.
